Professional Summary

Results driven Software Engineer with 3 years 11 months of experience building scalable, secure, and high-performance full stack applications across financial services and enterprise platforms. Strong background in React, Node.js, Python, RESTful APIs, and database driven systems, with hands on experience delivering production grade solutions at EPAM Systems. Proven ability to design end to end systems, integrate third party services, and optimize application performance in Agile environments. AWS certified engineer with a solid foundation in system design, data structures, and modern software development practices.

Technical Skills

- **Programming Languages:** Python, JavaScript, TypeScript, Java, C++, SQL
- **Frontend:** React.js, HTML5, CSS3, Tailwind CSS
- **Backend:** Node.js, Express.js, Django, REST APIs
- **Web Development:** Understanding of SDLC, Sass, Bootstrap, React Hooks, React Redux, JSON, Fast Api (Python), Flask, Data Analytics
- **Databases:** MySQL, MongoDB, PostgreSQL, Redis
- **Cloud & Infrastructure:** AWS (EC2, S3, Route53, SES), VPS Deployment
- **DevOps & CI/CD:** GitHub Actions, Terraform, Ansible, Docker
- **Tools:** Git, GitHub, NPM, JIRA, Confluence
- **Architecture:** Microservices, RESTful APIs, Agile, MVC Architecture

Professional Experience

Software Engineer | EPAM Systems

Hyderabad, India (Jan 2022 – Nov 2023)

- Designed and developed an internal Maternity Leave Request Portal for EPAM employees, streamlining HR workflows and reducing manual processing through a centralized, self-service application.
- Implemented Redis caching to reduce API response latency and improve application performance for frequently accessed data.
- Deployed and managed application services on AWS EC2 instances, configuring secure access, environment variables, and automated deployments.
- Integrated AWS S3 for scalable file storage and asset management, enabling secure upload and retrieval workflows.
- Configured domain routing and DNS management using AWS Route53 to support reliable service accessibility.
- Implemented CI/CD pipelines using GitHub Actions to automate build, testing, and deployment workflows.
- Utilized Infrastructure as Code (IaC) with Terraform and configuration management using Ansible to provision and maintain cloud environments.
- Managed Node.js dependencies and build processes using NPM, ensuring consistent package management across environments.
- Designed scalable distributed systems and optimized backend services for high throughput and low latency.

Web Developer Intern | Sparks Foundation

Remote, India (Jun 2021 – Jul 2021)

- Built a Bank Management System from scratch using Django (Python).
- Created an interactive dashboard with over **1,000 data points** for financial transactions.
- Utilized MVC principles for efficient database interactions and data filtering.

Projects

Market Place | Web Application

- Developed a full-stack e-commerce application using **Node.js, Express.js, React.js**, and **MySQL**, following RESTful API architecture.
- Implemented **real-time chat functionality** using **Socket.io**, including authenticated user sessions and room-based messaging.
- Integrated **JWT-based authentication and authorization** with password hashing and role-based access control for secure user management.
- Improved application performance through **database query optimization, connection pooling, and response compression**.
- Deployed application on AWS EC2 VPS infrastructure with Nginx configuration and secure environment setup.
- Implemented CI/CD pipeline using GitHub Actions to automate testing, build, and deployment processes.
- Used Terraform to provision cloud infrastructure and Ansible for automated server configuration and deployment.
- Integrated Redis caching layer to optimize frequently accessed product and session data.

Playbook | Full-Stack Real-Time Stock Portfolio Tracker [Link: playbook-sigma-nine.vercel.app]

- Full-Stack Architecture: Developed a high-performance stock tracking platform using React 19, Node.js, and MongoDB, supporting real-time data for NASDAQ and NSE markets.
- Hybrid Data Engine: Engineered a hybrid market data synchronization engine (Node.js/Python), optimizing retrieval from Yahoo Finance API to ensure sub-second latency for live price updates.
- Real-Time Volatility Tracking: Implemented 1-second real-time polling and integrated @number-flow/react with Framer Motion to deliver "roulette-style" digit animations for live P&L tracking.
- Visual Analytics: Designed and integrated a dynamic dashboard using Chart.js and Tailwind CSS, providing interactive visualization for portfolio allocation and performance metrics.
- Security & Authentication: Managed secure user workflows with JWT-based authentication and BCrypt hashing, ensuring data integrity for personalized trading portfolios.
- Automated Communication: Developed a professional SMTP-based notification system using Nodemailer, delivering individual trade alerts and privacy-focused user communications.
- Developer Experience: Utilized Vite for optimized build cycles and Tailwind CSS for a responsive, modern glass morphism design system.

Eventure | Event Management Platform

- Developed a full-stack **MERN** web application with RESTful APIs, implementing **JWT-based authentication**, role-based access control, and email verification workflows.
- Integrated **Stripe payment gateway** with webhook handling to support secure checkout, payment processing, and refunds.
- Built a responsive **React** frontend using **Vite and Tailwind CSS**, implementing protected routes, state management, and dynamic UI components.
- Implemented secure backend services using **Express.js**, including password hashing, token-based authentication, and middleware for authorization and request validation.
- Added file upload and email notification features, and deployed the application with environment-based configuration and robust error handling.
- Integrated AWS S3 for media storage and implemented secure file upload workflows.
- Configured domain management and DNS routing using AWS Route53.
- Automated deployment pipeline with GitHub Actions to ensure reliable continuous integration and delivery.

Face Recognition Based Attendance Management System

- Developed an automated attendance system using **computer vision** and machine learning to recognize students in real-time classroom environments.
- Implemented face detection and recognition using **OpenCV (Haar Cascades, LBPH)** and Python for multi-face identification.
- Processed and managed attendance data using **NumPy** and **Pandas**, enabling reliable CSV-based reporting.
- Designed a complete ML workflow covering data collection, **model training**, real-time inference, and report generation.

Education

University of Texas at Arlington

Master of Science in Computer Science | GPA: 3.6/4

Arlington, TX, USA

Visvesvaraya Technological University

Bachelor of Engineering in Computer Science | GPA: 8.47/10

Bangalore, India

Certifications & Achievements

- AWS Certified Solutions Architect – Associate | Amazon Web Services
- AWS Certified Developer – Associate | Amazon Web Services
- Received appreciation for high-impact contributions to front-end development in Q1 2023 at EPAM.
